Education

University of Washington

Expected June 2028

Bachelor of Science in Computer Science (GPA: 3.80 / 4.00)

Seattle, Washington

Relevant Coursework: Systems Programming (C/C++), Operating Systems (C), Data Science (Python), Computer Architecture (Verilog, Embedded Design), Software Design and Implementation (Design/Theory),

Experience

Teaching Assistant - Systems Programming

March 2026 – Present

University of Washington

Seattle, Washington

- Managed autograder infrastructure and coordinated grading distribution for the TA team
- Provided lecture support to professors ensuring content was given effectively

Lead Developer - MITRE Embedded CTF Team

September 2024 – Present

Batman's Kitchen - UW Cybersecurity Club

Seattle, Washington

- Coordinated programming division of UW's eCTF team of 20+ members
- Designed cybersecurity curriculum related to cryptography, low level programming, and binary exploitation and provided mentorship for new students
- Wrote security-critical embedded software implementing cryptographic protocols and defenses against common hardware attacks
- Built cybersecurity skills in secure programming, binary exploitation, web security, and reverse engineering through weekly workshops and CTFs

Discovery Intern

July 2024 – Aug 2024

Microsoft

Redmond, Washington

- Designed and implemented new web pages for ONNXRuntime website (250k monthly visits) using Svelte.JS, DaisyUI, and TailwindCSS to create responsive, scalable, and accessible pages.
- Collaborated with stakeholders throughout the development lifecycle to ensure a satisfactory final product.
- Built professional skills by networking with employees across teams via workshops, coffee chats, and meetings.

Team Captain & Lead Programmer

May 2021 – June 2024

FIRST Tech Challenge Robotics - Hazen Scarabs | FTC 8693

Renton, Washington

- Led 15 students in annual robotics challenges, ensuring design, programming, and outreach deadlines were met, and implemented organizational standards through design and code reviews.
- Started 12 LEGO League and FTC teams for 200+ underserved students, personally mentoring 4 teams.
- Raised \$75,000 by engaging local businesses and advocated to WA legislators to expand CTE funding.
- Qualified for WA State Championships 3x, winning control, design, and innovation awards.

Projects

Embedded Satellite System | C, Python

- Collaborated with cybersecurity students to design satellite encoding/decoding on an embedded system.
- Designed a tree-based key system to decode an n-sized decoding range with a logarithmic number of keys
- Followed secure programming principles to prevent attacks and used those same principles to exploit others designs

Autonomous Path Follower | Java, Python

- Reworked a localizer library to better suit team needs and improve tracking accuracy on a novel drivetrain
- Designed a path following system using cubic spline curves for precise robot control, speeding up autonomous route development by 30% and boosting scoring by 20%
- Leveraged vision for re-localization via field markers and on-the-fly board scanning, increasing scoring by 10%

Other Projects: Enigma Machine Simulation (Java), Spotify Data Analysis (Python), WIP: Utility Meter RF Analysis (Python)

Technical Skills

Languages: Python, Java, C/C++, Learning Rust

Technologies: Pandas, OpenCV, Tensorflow, Pytorch, Selenium, JavaFX, Ghidra, GDB, Docker, Burp Suite, Wireshark

Concepts: Defensive Programming, Embedded System Design, Cryptography, Virtual Memory, Cache Memory

Awards & Honors

Spokane Cyber Cup CTF 1st Place, National Cyber Scholarship Finalist (2x), UW FearLess Tech More 2021 Winner, FTC Dean's List State Semifinalist (2x), 2nd Computer Applications (MS Office) @ WA FBLA States; 3rd Computer Problem Solving & 2nd Cybersecurity @ West FBLA Regionals
